

System implementation

A popular definition for System Implementation is *putting a planned system into action*. It may sound simple, but it is not. System Implementation projects are long difficult journeys by which organisations move from an old set of technology to a new one technology.

To implement a system successfully, a large number of inter-related tasks need to be carried out in an appropriate sequence. Utilising a well-proven implementation methodology and enlisting professional advice can help, but often it is the number of tasks, poor planning and inadequate resourcing that cause problems with an implementation project, rather than any of the tasks being particularly difficult. Similarly with the cultural issues it is often the lack of adequate consultation and two-way communication that inhibits achievement of the desired results.

Bizmod has been involved in various System Implementations ranging from Enterprise Resource Planning (ERP) and workflow to custom applications and we prefer to remain product independent. During System Implementations they use their expertise, methodology and toolkits for their three interdependent knowledge areas of project management, change management and business analysis.

In the implementation of any new system, it is necessary to ensure that the consumer community is best positioned to utilise the system once deployment efforts have been validated. Therefore, all necessary training activities must be scheduled and coordinated.

As this training is often the first exposure to the system for many individuals, it should be conducted as professionally and competently as possible. A positive training experience is a great first step towards customer acceptance of the system.

Bizmod is particularly proud of their Change Management and Training Service offerings developed specifically for System Implementations. These propositions are unique and based on years of actual on site experience. Although their propositions have a solid theoretical foundation, they know what works in practice and what will benefit an initiative.

Bizmod Consulting is a modern company that believes in flexibility, balance and collaboration. They specialise in services relating to:

- Business and Process Analyses
- Project Management
- Change Management

Bizmod Consulting is particularly well versed in designing and implementing solutions which are customised to meet a client's specific needs. The Bizmodian team works on a basis of trust and value creation and aim at building sustainable long lasting relationships with their clients.

Bizmodian relationships are characterised by a project based approach, solution customisation, product independence, delivery focus and quality.
